Jansen Project Update

Globally, BHP Billiton has four main businesses — Coal, Copper, Iron Ore and Petroleum, with Potash being a potential fifth material asset. Our purpose with these businesses is to create long-term, shareholder value through the discovery, acquisition, development and marketing of natural resources.

Jansen is our most advanced Potash project and is in the studies stage, with full construction subject to approval by the BHP Billiton Board. On site, the shaft excavation process is well underway and we are completing the studies necessary to present the project to the Board for approval to progress to execution. There are now about 200 people at Jansen, although this number fluctuates with the work being undertaken.

Our current scope of work falls under the additional US\$2.6 billion of investment approved in 2013 and total approved spending on Jansen sits at US\$3.75 billion. Most of the initial surface infrastructure is complete including the sewage and water treatment plant along

with site water, power and gas supply. The Service Shaft permanent headframe and the Discovery Lodge 2,586 person construction camp are also complete.

Did you know?

Since 2008, BHP Billiton has invested over \$15 million CAD on over 550 projects in communities in Saskatchewan and locally. We focus on projects that promote social inclusion, health and wellness, education and training, enhancing livelihoods, biodiversity and water.

Bike Rodeo and Safety Day

BHP Billiton is once again partnering with Safe Communities Humboldt and Area for the 3rd annual Bike Rodeo and Safety Day to be held on 18 June during the Humboldt Summer Sizzler. The first 200 children participating in the Bike Rodeo will be fitted with a bike helmet and be entered to win one of two bicycles. Watch www.humboldt.ca/summersizzler for details.

Discovery Lodge preservation – quick facts

The Jansen Project construction camp, Discovery Lodge, is not completely full, so below is a list of ways BHP Billiton has reduced activity, while still making sure we preserve and care for the camp:

- The Discovery Lodge camp is a 980,000 square foot accommodations facility
- There is currently one active wing and three under care and preservation
- The areas under care and preservation need the minimum lighting required to perform inspection and maintenance
- We lower the thermostat temperatures and shut off some lighting and hallway HVAC units in unused areas
- A minimum amount of power is required to maintain these areas
- The areas under care and preservation are inspected on a regular basis

A hallway in the Discovery Lodge construction camp.

The three wings highlighted in orange are under care and preservation the one highlighted in green is active.

BHP Billiton and Day Star First Nation complete Water System Project

BHP Billiton and Day Star First Nation are pleased to announce the installation of a low pressure water system at the Day Star First Nation. This project connected the final fifteen (15) homes on the First Nation that did not have a permanent connection to the community Water Treatment Facility. Previously, these homes operated on cisterns and trucked potable water services. This project was funded from the Opportunities Agreement signed between BHP Billiton and Day Star First Nation in October of 2013. Work commenced on 21 September and was completed by 29 October 2015 by Tollifson Cable Services Ltd. of Moose Jaw.

Chris Ryder, Head of Corporate Affairs for BHP Billiton said that “providing access to continuous basic drinking water is an essential service. We are pleased that we

could work in a collaborative manner with the administration to successfully complete this project ahead of schedule and under budget. Furthermore, our hope is that this project continues to build upon the strong community spirit of the residents of the Day Star First Nation.”

Chief Lloyd Buffalo of the Day Star First Nation said that “We cannot overestimate the importance of an ample supply of clean water for our people. This project will bring about positive outcomes in all aspects of Day Star peoples lives including improved health, better preparations for education and employment, and overall pride in our community and its residents. Moreover, it is an excellent example of what we can do when First Nations leaders and Industry work together to improve the quality of life of those who wish to participate in, and benefit from development in this country.”

The Day Star First Nation is situated approximately 75km from the Jansen Potash Project.

Jansen Project Environmental Monitoring Program

The Jansen Project Environmental Monitoring Program is used to detect changes to the environment that may be related to the Jansen Project, and work as an early warning system that contributes to an adaptive management approach to environmental stewardship. The monitoring program is risk-based with consideration given to project activities and their effect on valued ecosystem components. The current monitoring program includes a network of monitoring solutions around the mine surface development area, around Jansen Lake and Wolverine Lake. Where applicable, monitoring stations were co-located to maximize potential for identifying effects. In addition to these stations, far-field monitoring stations were established to provide regional context to the monitoring data. The current program includes:

- Dustfall monitoring;
- Meteorology;
- Noise monitoring;
- Wildlife monitoring and;
- Groundwater monitoring.

Future monitoring programs include:

- Particulate matter monitoring;
- Continuous Air Quality monitoring;
- Surface water monitoring;
- Wetland monitoring and;
- Soil monitoring.

For more information, or if you have questions about the Jansen Project Environmental Monitoring Program, please contact the BHP Billiton Environment Team via email at potash.environment@bhpbilliton.com.

BHP Billiton LeRoy Office Team Visits

BHP Billiton representatives will be available to answer questions from the public. People are invited to drop in to the LeRoy office (105 1st Avenue South in LeRoy, SK) with questions or comments. The next team visit is:

9 June 2016, 10:00 am – 2:00 pm: Designing a Safe Site (Prevention through Design)

Jansen Outdoor Recreation Facility becomes closer to completion

On 12 April, Jeremy Breker (Senior Manager Project Delivery) and Ken Smith (Manager Community) attended the Rural Municipality (RM) of Prairie Rose Ratepayers Supper Meeting to present a donation of \$15,000 CAD to the Jansen Outdoor Recreation Facility. BHP Billiton's contribution will assist the Jansen Recreation Board, who is the fundraising organization for the project, to complete the final stages of work required to complete the kitchen and bathrooms by late June.

BHP Billiton also donates the use of unoccupied farm land at the Jansen Potash Project to the Jansen and District Kinsmen who farm the land to raise money for community projects. The volunteers to the Jansen and District Kinsmen provide their own equipment and time, along with donations of supplies from other organizations, to seed, spray and harvest successful crops in 2014 and 2015 raising a total of \$165,000 CAD. This money has gone towards the construction of the Jansen Outdoor Recreation Facility. In the coming years, this facility will serve as a vital community gathering place for events.

The Village of Jansen and RM of Prairie Rose host the annual Jansen Lites Up the Night celebration on the evening of Canada Day on 1 July, of which BHP Billiton is also a sponsor. This event attracts over 1000 people from the surrounding area each year. In late June and

early July of 2017, the Village of Jansen and the RM of Prairie Rose will also host the Jansen Homecoming.

The Village of Jansen has approximately 130 residents and is located 10km south of the Jansen Potash Project. The RM of Prairie Rose No 309 has approximately 260 residents.
